What is a TOCON?

A TOCON is a 5 Volt powered photodetector with integrated amplifier converting visible light radiation into a 0...5V voltage output. The V_{out} pin of the TOCON can be directly connected to a controller, a voltmeter or any other data analyzing device with voltage input. Highly modern electronic components and a hermetically sealed metal housing with glass window eliminates noise caused by parasitic resistance paths inside the package or EMI. A TOCON is a perfect solution for each industrial light sensing application starting from stray light detection at pW/cm² level up to sun light measurements at W/cm² level. This thirteen orders of magnitude range is covered by ten different TOCONs that differ by their sensitivity. The TOCONs are produced as broadband sensors or with filters for selective measurement.

APPLICATION NOTE FOR TOCONs

The TOCONs need a supply voltage of $V_{\text{supply}} = 2,5 \dots 5V_{\text{DC}}$ and can be directly connected to a controller or voltmeter. Please note that the theoretic maximum signal output is always a little less (approx. 5%) than the supply voltage. To learn more about perfect use of the TOCONs please refer to the TOCON FAQ list published at www.sglux.com.

CAUTION! Wrong wiring leads to destruction of the device.

For easy setup of the device please ask for a TOCON starter kit.
